

LEAD RECOVERY & RESPONSE SYSTEM

Turn missed follow-up into **booked revenue.**

Ember Bots builds done-for-you growth systems for service businesses that already have demand, but lose opportunities when calls, forms, estimates, reviews, and after-hours inquiries are not worked consistently.

Most local service businesses do not have a lead problem. They have a response-execution problem.

Our front-end offer is the **Missed Revenue Snapshot**: a specific, evidence-grounded look at where public lead paths may be leaking before a prospect books.

01

Find visible lead-leak signals in the public customer journey.

02

Implement response, recovery, and follow-up workflows.

03

Operate and optimize the system around booked-job impact.

THE DIAGNOSTIC

Start with proof, not generic AI promises.

The snapshot gives Steve a specific reason to call: Ember reviewed the public buying path and found places where good leads may be slowing down before they book.

What we look for

- Unclear phone, booking, or contact path that creates friction for urgent buyers.
- Web forms or estimate requests with no clear follow-up expectation.
- No obvious after-hours capture or missed-call recovery path.
- Review themes suggesting callback, scheduling, estimate, or communication friction.

Who fits first

- Owner-led HVAC, plumbing, and home-service operators.
- Strong local footprint with enough demand to make follow-up valuable.
- Visible public evidence that the customer journey can be tightened.
- Teams great at service delivery, but inconsistent in front-office execution.

Snapshot output

Company fit

Local proof, reputation signal, territory fit, and why the account deserves a human call.

Evidence

Lead-leak signals

Two to four specific observations pulled from public pages, reviews, forms, and contact paths.

Action

First fix

Missed-call text-back, web-lead response, estimate follow-up, after-hours capture, or review workflow.

Important standard: We do not invent missed calls, revenue numbers, or private operating details. The snapshot uses specific public evidence and careful language so the outreach stays credible.

THE PAID OFFER BEHIND THE SNAPSHOT

We build the operating system that closes the gaps.

The Lead Recovery & Response System converts the snapshot into deployed workflows, cleaner customer communication, and ongoing optimization.

1

Diagnose

Review the public buying path, CRM context, response expectations, reviews, and contact-flow friction.

2

Implement

Install the highest-leverage workflows: missed-call recovery, web-lead response, estimate follow-up, review requests, and after-hours capture.

3

Operate

Monitor performance, refine messaging, tighten handoffs, and keep the business focused on booked revenue rather than tool management.

Starter

\$1,500 setup

\$750 / month

- Basic lead follow-up
- Review workflow support
- Good fit for simple operations

Growth

\$2,500 setup

\$1,250 / month

DEFAULT

- Response and follow-up workflows
- Best fit for HVAC/plumbing wedge
- Designed around revenue capture

Managed Growth

\$4,000 setup

\$2,000 / month + ad spend

- Higher-touch growth system
- More hands-on optimization
- For higher-volume teams

HOW STEVE USES IT

A cleaner sales motion: specific account, specific evidence, specific next step.

This package gives the outreach a sharper reason to exist and a practical conversion path into the Growth package.

Call angle

“I had Ember look at your public lead path and it found a couple of places where good leads may be slowing down before they book.”

That opens the door without overclaiming, then points the owner to a short walkthrough of the snapshot.

Next actions

- ✓ Pick 10–15 high-quality local operators instead of junk-volume lists.
- ✓ Build one snapshot per account using public, provable evidence.
- ✓ Stage first-touch email and call notes for Steve.
- ✓ Convert qualified interest into the Growth package by default.

Why this is stronger than a generic AI pitch

Outcome

Sell booked revenue and cleaner follow-up, not software complexity.

Trust

Use evidence the owner can verify instead of broad automation claims.

Close path

Make the first fix obvious, then offer implementation and ongoing management.

Recommended default: Lead with the Missed Revenue Snapshot, sell the Growth package when the pain is real, and reserve Managed Growth for higher-volume operators who need a hands-on growth system.
