

LEAD RECOVERY & RESPONSE SYSTEM

New View already earns trust. Now make sure the revenue path converts.

This proposal tailors Ember Bots around New View Roofing's strongest opportunity: recovering more value from the demand the brand already creates through faster response, cleaner inspection booking, stronger estimate follow-up, and less insurance/admin drag.

The pitch is not “AI.” The pitch is fewer lost roofing opportunities between first contact and signed job.

For roofing, speed and follow-through matter because urgent storm, leak, and replacement inquiries often go to multiple contractors at once.

01

Capture missed calls, forms, and after-hours roofing inquiries.

02

Book inspections faster with reminders and rescheduling flows.

03

Keep estimates, claims, and stalled opportunities moving.

NEW VIEW DIAGNOSTIC

Where roofing revenue can leak before the job is won.

The snapshot should give Steve a specific reason to call: Ember reviewed the public buying path and found places where good roofing leads may slow down before inspection, estimate, or close.

Likely leak points to inspect

- First-response friction when urgent storm or leak inquiries need immediate confidence.
- Missed-call and after-hours capture gaps for phone-heavy roofing demand.
- Inspection scheduling delays, reminder gaps, and rescheduling drop-off.
- Estimate follow-up and insurance-process communication that depends too much on manual memory.

Why New View fits

- High-ticket local roofing work means each recovered job can matter materially.
- Trust and service reputation create demand worth protecting.
- Roofing has repeatable handoffs: inquiry, inspection, estimate, claim, schedule, close.
- Operational follow-up can improve without replacing the human relationship that wins jobs.

Snapshot output

Company fit

Why New View is worth the call and which public lead-path signals create the opening.

Evidence

Lead-leak signals

Specific observations around response path, booking friction, review themes, and customer next steps.

Action

First fix

Usually missed-call recovery, instant inquiry acknowledgment, inspection booking, or estimate follow-up.

Careful standard: We should not claim New View is losing specific dollars without discovery. The public-facing language should say “may be losing booked jobs when...” and then tie it to a concrete observed friction point.

WHAT EMBER WOULD IMPLEMENT

A roofing-specific operating system for response, booking, and follow-up.

The goal is not more software. The goal is to make sure every worthwhile inquiry is acknowledged, routed, scheduled, followed up, and surfaced before it goes cold.

1

Instant response + missed-call recovery

SMS/email acknowledgment, missed-call text-back, after-hours capture, and clear next-step routing for urgent roofing inquiries.

2

Inspection booking + reminders

Booking prompts, appointment reminders, rescheduling workflows, and daily visibility into new/stuck opportunities.

3

Estimate + insurance follow-up

Structured follow-up for estimates, dormant leads, document requests, insurance-process reminders, and handoff tasks.

Why it pays back

- Each recovered roofing job has meaningful value.
- Speed-to-lead improves the chance of booking the inspection.
- Structured follow-up protects already-earned opportunities.
- Admin automation gives the team more time for sales and service.

Discovery numbers to validate

- Average job value and close rate by lead source.
- Monthly missed calls/forms and after-hours volume.
- Inspection booking rate and estimate follow-up cadence.
- Where insurance coordination stalls most often.

RECOMMENDED APPROACH

Lead with a New View-specific snapshot, then sell the Growth package.

The clean sales motion is specific account, specific evidence, specific first fix — then a practical implementation path if the pain is real.

Starter

\$1,500 setup

\$750 / month

- Basic lead follow-up
- Review workflow support
- Simple response workflows

Growth

RECOMMEND

\$2,500 setup

\$1,250 / month

- Best fit for New View
- Response, booking, and follow-up workflows
- Revenue recovery focus

Managed Growth

\$4,000 setup

\$2,000 / month + ad spend

- Higher-touch system
- More hands-on optimization
- For higher-volume roofing operations

Steve call angle

“I had Ember look at New View’s public lead path and it found a couple places where good roofing leads may slow down before they book an inspection or move forward on an estimate.”

Next actions

- ✓ Finish a New View-specific Missed Revenue Snapshot.
- ✓ Validate average job value, missed-call volume, and inspection booking flow.
- ✓ Pitch Growth as the default implementation package.
- ✓ Expand later into claims coordination and daily stalled-opportunity alerts.

Bottom line: New View appears to have the brand trust. Ember Bots helps make sure the operating system behind that trust converts more inquiries into inspections, more inspections into estimates, and more estimates into signed roofing jobs.
